

WORK PERMIT SOFTWARE

Field service engineers often perform high-risk specialized work—electrical maintenance, hot work zones, height work, confined areas, demolition support, and troubleshooting in unfamiliar plant conditions. In many industrial sites, the biggest compliance gaps don't happen during the job—they happen at the gate, under time pressure. Axis Gatepass Facility Management Work Permit Software includes a purpose-built module for this exact problem

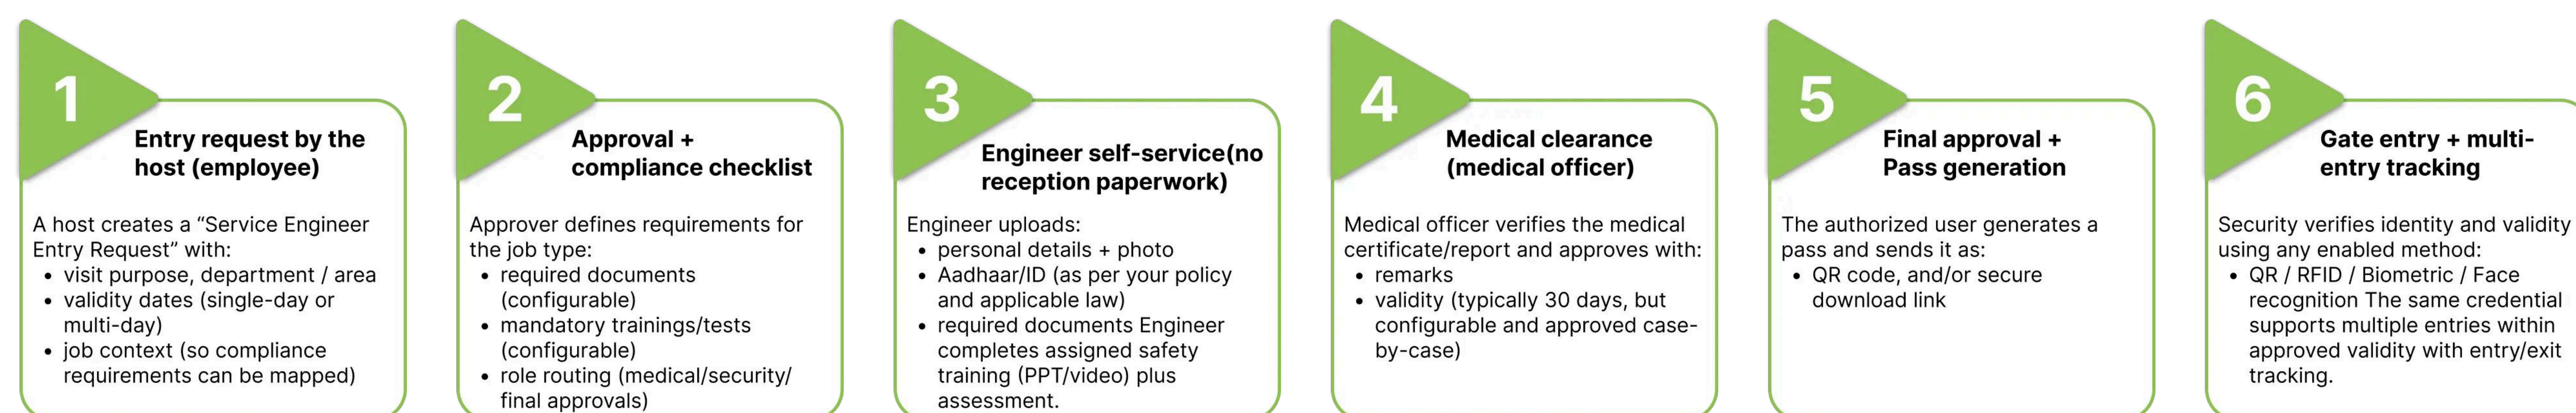

Service Engineer Entry Compliance Module

A practical, Work Permit Software style entry workflow that ensures approvals, documents, safety training, medical fitness, and identity verification are completed before entry. This solution was developed based on real requirements from a leading cement manufacturer and is being adopted progressively across multiple sites—starting with high-impact use cases and expanding as more tenants and scenarios are onboarded.

Geo focus: Built and deployed from Ahmedabad/Gujarat, designed for pan-India industrial organizations with strong EHS expectations.

How it works (end-to-end workflow)

Key capabilities

Configurable compliance checklist

Examples commonly enforced:

- PF documentation
- ESIC documentation
- Purchase Order (PO) reference
- Aadhaar / National ID
- Medical Fitness certificate
- Safety certificate / induction proof
- Self-Declaration

Plus: mandatory/non-mandatory flags, mapping, and validity/expiry rules.

Safety training inside the workflow

PPT/video-based training content

- minimum playback time enforcement
- question bank + passing score
- training validity period
- language selection

Role-based approvals and accountability

Host → Approver → Service Engineer → Medical Officer → Final Approval → Security
No ambiguity about who must do what, and by when.

Automated notifications

Email/SMS at every milestone:

- pending uploads
- training assigned/completed
- medical pending/cleared
- pass generated
- reminders/escalations for delays

Audit-ready trail

- A complete record of:
- approvals, timestamps, remarks
- uploaded evidence
- gate entry/exit logs
- validity history

Fast lane for repeat engineers

Pre-approved engineers experience faster entry because the system reuses validated information and checks validity automatically.
